

Import requirements to the European Community (EU)

Please note that the information is up to date but since the rules and regulations are subject to change, we advise you to always check with your veterinarian for the latest information and/or contact the appropriate authorities for your destination

1. Microchip

Each pet shall be identified by means of a microchip. No other form of identification is acceptable. The microchip used should comply with ISO Standard 11784 or Annex A to ISO standard 11785- otherwise the pet will need to be sent with its own scanner attached to the top of the kennel.

2. All animals need to have full vaccinations

Dogs: Distemper, Hepatitis, Parvo, Leptospirosis, (DHLPP) and Rabies within the last 12 months or a minimum of 4 weeks before arrival.

Cats: Feline Viral Rhinotracheitis, Calicivirus, Panleukopenia (FVRCP), and Rabies within the last 12 months or a minimum of 4 weeks before arrival.

3. EU Vet Health Certificate

This is the standard Health Certificate to be filled out by your accredited Veterinarian. This certificate is valid for 4 months prior to departure date so do not get this issued too early.

4. International Health Certificate

This is an international health certificate that needs to be completed by your vet within 10 days of departure.

5. All original documentation

As listed above must travel with the pets.

6. Documents before arrival

In order for us to successfully clear customs we will need the following documents supplied prior to the animal's arrival.

- Copy of Pet Owner's Passport
- Note from Pet Owner's Employer for the Relocation
- Owner's Flight Itinerary (If traveling separately)

Note: On the day of travelling, make sure that all documents are attached to your pet's travel kennel and make sure you have at least one copy of all the documents
